12V lead-acid battery single

Overview

The valve regulated, spill-proof construction of this 12 V 12 Ah SLA battery allows trouble-free, safe operation in any position. There is no need to add electrolyte, as gases generated during charging are recombined in a unique "oxygen cycle". Low self-discharge rate allows for storage of fully charged batteries for longer periods of time before charging is required. Lower storage temperatures will further extend shelf life. May be discharged over a temperature range of -40°C to +60°C (-40°F to +140°F), and charged at temperatures ranging from -20°C to +50°C (4°F to +122°F). The high-impact resistant battery case is made either of non-conductive ABS plastic or styrene. Large capacity batteries frequently have polypropylene cases, all of these materials impart great resistance to shock, vibration, chemicals and heat.

Can I charge a lead acid battery with a lithium ion battery?

If I were to connect a fully charged 15V Li-ion battery to a discharged 12V lead acid battery (at around 11.5V), would the Li-ion battery charge the lead acid battery? My theory is that since the potential at the battery terminals is about 14.7V when the car's alternator is running, attaching a 15V battery will have the same effect.

Battery Voltage Chart: A Comprehensive Guide

A 12V lead-acid battery might read 10.5V when empty, while a 12V lithium battery could go down to 11.5V. ... Use a multimeter to check if it's holding a charge well. A fully charged 12-volt battery should read about 12.6 to 12.8 volts. Look for signs of damage like cracks, bulges, or leaks. Clean off any corrosion on the terminals with a wire ...
