Lead-acid rechargeable battery brand

Overview

The lifespan of a 12V lead-acid battery can vary depending on factors such as manufacturing process and temperature. Sealed lead-acid batteries can last anywhere from 3 to 12+ years. It is important to consider. Lead-acid batteries can be dangerous if mishandled. They have the potential to deliver high electric charges and release flammable hydrogen and oxygen gases during charging. While lead-acid batteries may be considered outdated for some modern applications, they are. There are three main types of lead-acid batteries: flooded acid, gelled acid, and Advanced AGM (Absorbed Glass Mat). Each type can be designed for either starting or deep cycle. Lead-acid batteries have several advantages, including being inexpensive and simple to manufacture. They are a mature and well-understood technology, offering reliable performance.
