

TSHISEVHE C&I ENERGY

Pakistan europe renewable energy

Overview

With 137 TWh of electricity generated, the share of renewable energy sources (wind, solar, and bagasse) remained at 5%, falling short of projected targets and also not on track to meet the 2030 target of achieving a 30% renewable energy share in the energy mix. In Dasht, a remote village in the southern part of Balochistan, geographically Pakistan's largest province, Baksh's crops for years depended on a diesel-powered pump that drew water from the ground to irrigate his land. That changed after Russia's full-fledged invasion of Ukraine in 2022, which set. The German government, through KfW Development Bank, has committed €27 million to transform Pakistan's energy landscape by funding a new substation at the Gharo Wind Corridor. Distributed energy resources (DERs) saw significant growth, with net-metering installed capacity.
